## Educational Needs of Urologists on Bone Health in Prostate Cancer

*Pamela Ellsworth, Providence, RI; Gina Carithers, Berkeley, CA; Rachel DiPaolo and Purvi Kobawala Smith, Ramsey, NJ*

### **Goal**

- To assess the need for education in screening for bone-related AEs in prostate cancer patients and provide knowledge of therapies for bone-health management in this patient population.

### **Method**

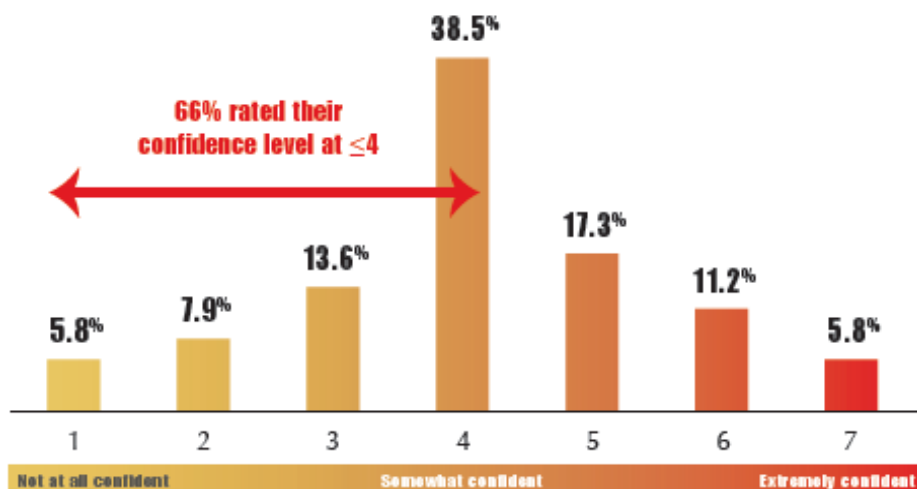

- A survey was electronically distributed to UroToday<sup>®</sup> subscribers evaluating: 1) bone-health screening in men with prostate cancer, and 2) knowledge of treatment and prevention strategies in prostate cancer patients at risk for skeletal-related complications, particularly those on ADT. Responses were received from 365 participants.

### **Key Findings**

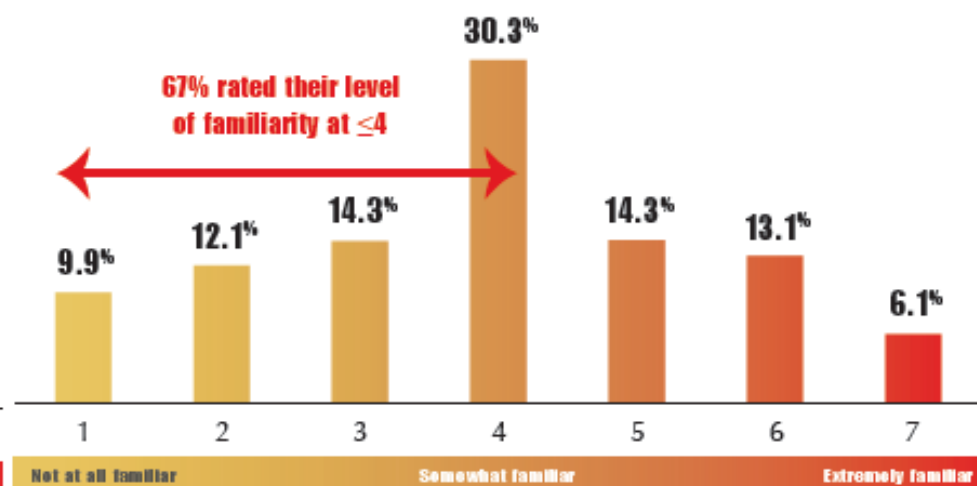

- Most respondents lacked confidence in screening for bone-related AEs in men with prostate cancer undergoing ADT.
- Participants were less knowledgeable of mechanisms of action for current and emerging agents for the prevention and treatment of prostate cancer with skeletal-related events.

# Educational Needs of Urologists on Bone Health in Prostate Cancer

Please rate your confidence in screening for bone-related adverse effects in prostate cancer patients on ADT. (n=330)

Please rate your familiarity with the mechanisms of action for emerging agents in the prevention of SREs in prostate cancer patients. (n=314)

Please rate your familiarity with the mechanisms of action for bisphosphonates in the prevention of SREs in prostate cancer patients. (n=319)

What tool(s) do you use when assessing risk for skeletal related events in prostate cancer patients? Please check all that apply. (n=279)
